

Driving Suit Care

Molecule™ Labs Nomex® Care System

Molecule™ Labs Fabric Treatment
Racing suits made from Nomex® fabric offer protection from flames and heat; however, Nomex® is not meant to repel flammable liquids. Severe burns occur more often than they should because combustible spills and stains remain in the porous material of protective clothing and can ignite during flash fires. The Molecule™ Fabric Care System makes Nomex® suits virtually impervious to flammable liquids, while cleaning and refreshing your suit in the wash. Molecule™ has been designed for the unique soils of the racing environment, and removes even the most difficult stains, protecting the wearer against flash fires. The easy-to-use suit treatment kit is a four step system that you can use in your home washing machine and dryer, making expensive dry cleaning a thing of the past. The full kit (shown) includes enough to treat and maintain two suits. The Wash kits each include bottles of Wash and Spot Cleaner only.

Molecule™ Labs Suit Care Kit Part No. MOL-100 \$99.99
Molecule™ Labs 16 oz. Wash Kit Part No. MOL-125 \$34.99
Molecule™ Labs 4 oz. "Trial" Wash Kit Part No. MOL-126 \$9.99

Refill components available separately:

- Molecule™ Labs 16 oz. Protector Spray only Part No. MOL-120-16oz \$49.99
Protector Spray repels liquids to keep your suit clean without affecting breathability. It also blocks the sun's UV rays to prevent colors from fading. Suits should be re-treated with Protector once a season. A single treatment will use about half of a 16 ounce bottle.
- Molecule™ Labs 16 oz. Refresh Spray only Part No. MOL-121-16oz \$19.99
Use the Refresh Spray between washings to keep your suit smelling fresh and clean. Keep one in your gear bag for use between sessions and you won't dread getting suited up!
- Molecule™ Labs 16 oz. Wash only Part No. MOL-122-16oz \$19.99
The Wash works in your washing machine to keep your suit clean. It also makes your suit smell great! Use it on your suit, Nomex® or CarbonX undergarments, and balaclava. Depending on how frequently you race, you will probably use up the Wash faster than the other components in the kit.
- Molecule™ Labs 16 oz. Spot Cleaner only Part No. MOL-123-16oz \$19.99
Molecule™ Labs 4 oz. Spot Cleaner only Part No. MOL-123-4oz \$5.99
Spot Cleaner is specifically formulated to remove the kinds of stains found in racing, including oil, grease, brake dust, and tire rubber.

Nomex® Thread, Zippers, and Hook & Loop

We have the materials you need to keep your Nomex® driving suit in top condition.

Nomex® Thread We stock Nomex® thread in the most popular suit colors for alterations or repairs. Available in Black, Blue, Grey, Orange, Red, White (natural off-white), or Yellow. **Now an even better value!** Approximately 100 yards per spool, for the same low price as our old 60-yard spools.

Nomex® Thread, specify color Part No. 2131-Color \$10.79

Nomex® Zippers Our zippers feature metal teeth for strength and flame resistance set into black Nomex® fabric. Zippers have two pulls and open from either end for access. Specify length: 22", 23", 24", 24.5", or 26".

Nomex® Zipper, specify length Part No. 2152-300-Length... \$19.99

Note: The most common cause of zipper failure is unzipping the suit only partway to let it hang around your waist. This causes the zipper teeth to pull out of the fabric.

Nomex® Hook & Loop Material Racing suits make extensive use of hook and loop material. When it wears out, it should not be replaced with generic material from the fabric store. Sold by the running foot, you get both the hook and the loop material. Natural off-white only. Also great for holding arm restraints in place!

Nomex® Hook and Loop, per foot Part No. 2152-200 \$6.99/ft

Pegasus Tee Shirt

Our **Pegasus Tee Shirt** features sharp, silk screened graphics printed on the front and back of a pre-shrunk, heavyweight Hanes Tagless® 100% cotton white T-shirt. The left front has a small blue Pegasus logo, and the back has a brilliant full-color racing design by fellow SCCA racer Mike Sturm. The silk screening has vivid colors and great detail, but it still allows the shirt to breathe for comfort. Available in sizes Medium through Extra Large.

Pegasus Tee Shirt, Medium through XL Part No. 9799-001-Size \$17.99

Personal Safety and Comfort

Shock Doctor Mouthguard

Even when the head is protected inside a helmet, the jaws can still crash together hard enough to damage teeth or even cause a concussion. The patented **Shock Doctor Gravity 2 Mouthguard** is specifically designed for racing drivers to fight concussion, TMJ disorder, oral lacerations (biting the cheek or tongue), and tooth injuries. It can also help minimize damage to your teeth if you tend to grind your teeth under pressure (not for use as a nighttime tooth guard). Other mouthguards cover the upper teeth, making speech difficult or impossible. The Gravity 2 covers only the lower teeth, allowing the tongue to contact the roof of the mouth and the upper front teeth for clearer speech. Your crew may not even know you're wearing it! Molds easily to a custom fit in most adult mouths.

Shock Doctor Gravity 2 Mouthguard Part No. SD-050 \$19.99

The **Shock Doctor Mouthguard Case** has a carabiner clip, a carbon fiber-look vented top panel, and an antimicrobial interior treatment to keep your mouthguard clean, dry, and protected between uses. Fits any brand or style mouthguard.

Shock Doctor Hard Case for Mouthguard Part No. SD-075 \$5.99

OMP Nomex® Elbow and Knee Pads

Are you sore, bruised or even bleeding the day after a race? These protective Nomex® pads are worn by many F1 drivers because they can prevent a lot of the discomfort that results from squeezing into tight, unpadded formula car cockpits. Sedan drivers like them too, especially when the front roll hoop takes up a little too much legroom or a Petty bar is positioned too close to the driver's elbow. Wear them over your driver's suit to protect the suit from excess wear and tear. The elbow pads can also help keep your arm restraints in place. Black only, one size fits all. Sold in pairs.

OMP Nomex® Elbow Pads, pair Part No. 2340-Black \$59.00

OMP Nomex® Knee Pads, pair Part No. 2341-Black \$79.00

Hearing Protection

Protect your ears! Exposure to sounds at levels of just 97 decibels (well below many race tracks' sound limits) for just 30 minutes can cause permanent hearing loss. Many race cars can exceed this level even at idle.

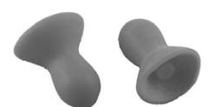

***NRR = Noise Reduction Rating - a higher number means more protection.**

Cylindrical Foam Ear Plugs block loud noises, yet permit normal conversation to be heard. Just roll them between your fingers to compress the diameter, then place into ear. They gently expand to form a snug fit. These inexpensive ear plugs are intended to be discarded after use. Sold in pairs in a cardboard storage pouch. NRR* = 29.

Cylindrical Foam Ear Plugs, pair Part No. 2139-Refill 29¢

Contoured No-rolling Foam Ear Plugs stay cleaner and last longer than rolled ear plugs. Simply insert them in the ear. The soft material conforms to the shape of the ear canal. Available plain (separate) or corded for convenience (no more hunting for the other ear plug). Sold in pairs. NRR* = 26.

Contoured Ear Plugs, pair Part No. 2196 99¢

Contoured Ear Plugs, pair, with cord Part No. 2197 \$1.99
